

SPAX®

DO IT ONCE. DO IT RIGHT.

MULTIhead - clean countersinking

Ridges mould into the wood surface, trimming the drilled hole. The head can be driven flush with the wood surface quickly and easily.

4CUT - prevents splitting the wood

The square end point not only stretches the material out, it divides the fibers reducing the screwing-in torque. No splitting, even if working close to the edge.

Optimized ground serrations

for quick and secure fastening without splitting the wood.

MULTIhead - prevents spinning

The ribs under the head prevent the screw from spinning and stripping the tapped thread. When driving metal hinges onto wood, the ridges stop at the wood, and prevent spinning.

SPAX - with new WIROX surface

Whatever the weather - WIROX for higher corrosion protection.

SPAX - The universal screw

Wide range of applications
for true universal usage
